Easy Install Just 5 Simple Steps

We strive to make your installation experience just as pleasant and relaxing as your fountain. Our “Certified Simple” instructions can have you enjoying your fountain within minutes of unpacking. Follow the 5 simple steps below to create your own urban oasis.

Tools required: Level, Pencil, Phillips Screwdriver and Measuring Tape.

1. Mount the Wall Bracket

Draw a small horizontal line on the wall indicating the top of where you would like to mount your fountain. Using your measuring tape, measure from the top of your fountain down to the center of the wall bracket (Fig 1.A). Using this measurement add two inches and draw a vertical line on the wall starting at the place where you wish the top of the fountain to be. This line marks the top of the wall bracket. Using a level, hold the Wall Bracket to the wall with top angled towards you. Mark the holes on the wall (Fig 1.B). To install the EZ Anchors™, gently tap or press the tip into the drywall and slowly screw the anchors into the wall. Make sure the flat side of the anchor is flush with the wall. Do not over-tighten the anchors as this will render them ineffective, as well as damage the drywall. If you encounter a wall stud while installing an EZ Anchor™, use the 1” mounting screw without the anchor.

2. Header & Shroud

Locate the Header and Shroud. The Header has longer tabs on the backside. Install the Shroud by carefully sliding it behind the panel and down over the reservoir (Fig 2.A). Install the Header by simply sliding it between the panel and support rails located behind the fountain (Fig 2.B).

Locate the LED Light cord. Unwind the light cord and run it down the back of the fountain. Peel off the backing on each Wire Clip and place them down the back of the panel on the side closest to your power source as shown in (Fig 2.C). Clip each to the light cord.

3. Set Light Tray & Hang

Locate the LED Light tray. The side with the LED light tube is the front. Simply place the light tray on top of the header (Fig 3.A). Inside the top of this tray is the remote receiver and the transformer. Plug the light cord into the transformer (Fig 3.B). Pull the light tray forward so it is in contact with the front of the header.

Lift your waterfall into place and engage the brackets by lowering it onto the Wall Bracket. Make certain the fountain is well seated and centered from left to right on the bracket.

4. Pump Connection

Your fountain’s pump(s) has already been placed inside the basin and the pump control(s) exits through the back of the panel(s). Simply connect the pump to the plumbing with the quick connect fitting. Make sure you have pushed the flow valve end as far as it will go inside the Pump Quick Connect fitting and tighten by twisting.

5. Fill and Start Up

After mounting your fountain on the wall, fill the reservoir with water. We strongly suggest the use of distilled water. Fill the base with water, see below for your model’s water requirements:

<table>
<thead>
<tr>
<th>Model</th>
<th>Gallons</th>
</tr>
</thead>
<tbody>
<tr>
<td>WWSVS</td>
<td>3 gal</td>
</tr>
<tr>
<td>WNWSVS</td>
<td>4 gal</td>
</tr>
<tr>
<td>WNWLS</td>
<td>6 gal</td>
</tr>
<tr>
<td>WNWLS</td>
<td>6 gal</td>
</tr>
<tr>
<td>WNWWS</td>
<td>7 gal</td>
</tr>
</tbody>
</table>

The water level must be maintained at least 1/2” - 1” above the pump. If the water level drops below the pump, splashing and damage may occur. This will also void the warranty. Never operate your fountain dry or with low water levels.

Before turning on your fountain for the first time make certain the flow adjuster is fully open, having the flow valve in a closed position puts excessive pressure on the pump and may cause it to overheat and break. Plug in the pump cord. The flow valve lets you increase or decrease the amount of water flowing over the waterfall. You will need to adjust the flow valve to the proper rate for solid water coverage but not so fast that it causes splashing. Turn the flow valve down if the pressure is too strong and splashing occurs.

You may need to assist the water sheeting when turning on from a dry state. Simply use your fingers to move the water where you see dry areas, pulling the water together.

When you’re satisfied with the flow you can place the rock tray inside the reservoir on the tabs. Spread Rocks evenly throughout the tray. Relax and enjoy your new fountain.

Refer to the “Important Information” section in this quick install guide for additional use and maintenance instructions.

**Bluworld HOMelements Warranty**

Bluworld products are warranted against defects that render it unfit for its reasonably intended use. This Warranty is not extended to excessive use of the product for a purpose other than as intended, and if the product is used unreasonably or for purposes other than as intended, it is abused, modified or repaired by a party other than Bluworld, then the Warranty shall be null and void. Our manufactured products are warranted for a period of 1 year against defects. This 1 year warranty covers all materials, workmanship, and performance issues. All pumps and light electrical combinations are warranted for a period of 6 months. The fountain and pond warranties are in effect beginning from the date of sale to the original retail purchaser and the rights under this Warranty are limited to the original retail purchaser. Bluworld will upon written notification thereof, take commercially reasonable steps to correct such defects (see "manufacturers defects below") of Bluworld’s sole discretion. This Limited Warranty is EXCLUSIVE and IN LIEU OF ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR OTHER WARRANTY OF QUALITY. WHETHER EXPRESS OR IMPLIED, EXCEPT FOR THE WARRANTY OF TITLE AGAINST PARTIHENSION. Consists of nonrefundables, in the manner and for the period of time provided above, shall constitute fulfillment of all liabilities of Bluworld to any dealer with respect to goods, whether based on contract, negligence, and strict tort or otherwise. Bluworld contract sales personnel, including but not limited to authorized Dealers and Resellers (collectively “Sales Personnel”), are not authorized to make warranties about Bluworld products.

Bluworld contract sales personnel, including but not limited to authorized Dealers and Resellers (collectively “Sales Personnel”), are not authorized to make warranties about Bluworld products.

**Important Information**

We know from experience most fountain problems are due to water and/or maintenance. We strongly recommend the use of distilled water which is free of any minerals. Tapwater is notoriously "hard” water. Full of hard minerals such as calcium and magnesium that will eat your fountain of its beauty and its ability to function properly.

The problem begins up the line. Water evaporates but minerals do not. The continued use of tap-water combined with evaporation creates a heavy mineral concentration causing a fountain to developcallous stains, ugly, white build-up, pump damage and the water distribution system to become clogged. We also suspect you run your fountain 24/7 whenever possible. Standing water will grow algae or become slimy from remaining stagnant. Running your fountain continuously while maintaining the proper water level will keep the maintenance down to a minimum and strengthen the life of the pump.

Often people use chlorine to clean their fountain, this is unfortunately, one of the worst things you can do. Chlorine or most products ending in “ide” or “ine” will turn a fountain into junk and damage your pump. We recommend non-leak additives like Fountec (an algicide) and Protec (a mineral and scale preventative) should you use tap-water. These are available through your authorized Bluworld dealer or Bluworld HOMelements.
